

SoundID Reference for Headphones

Product Description

A headphone calibration software delivering consistently accurate studio reference sound on your existing headphones. Software includes presets of more than 280 headphone calibration profiles. With an applied headphone calibration profile the software sets the frequency response target to be completely flat across all audible frequencies. The headphone frequency response target is designed to emulate neutral-sounding speakers. With calibrated headphones you'll hear a flat, consistent sound wherever you go.

Key Features

- Headphone calibration profiles for 280+ supported models
- Custom target: target curve adjustments in real time
- Translation Check: simulating 20+ different devices and device types for accurate mix translation results everywhere without leaving the workstation
- 3 filter modes: Zero Latency, Mixed and Linear Phase
- Additional DSP processing controls: Mono, Dry/Wet and Safe Headroom
- MIDI mapping in the SoundID Reference app for various controls
- User Presets in the SoundID Reference app for switching quickly between predefined output device/channel pair combinations

What's Included
